Under the authority of the *Pest Control Products Act*, Health Canada's Pest Management Regulatory Agency (PMRA) has concluded that the addition of a new use on strawberries to the product label of Rimon 10 EC Insecticide, containing technical grade novaluron, is acceptable. The specific use approved in Canada is detailed on the label of Rimon 10 EC Insecticide, *Pest Control Products Act* Registration Number 28515.

The evaluation of this novaluron application indicated that the end-use product has merit and value and the human health and environmental risks associated with the new use are acceptable. Details regarding the registration can be found in the corresponding Evaluation Report that is available in the Pesticides and Pest Management section of Health Canada's website, under Public Registry, Pesticide Product Information Database.<sup>1</sup>

Before registering a pesticide for food use in Canada, the PMRA must determine the quantity of residues that are likely to remain in or on the food when the pesticide is used according to label directions and that such residues will not be a concern to human health. This quantity is then legally established as a maximum residue limit (MRL). An MRL applies to the identified raw agricultural food commodity as well as to any processed food product that contains it, except where separate MRLs are specified for the raw agricultural commodity and a processed product made from it.

Consultation on the proposed MRLs for novaluron is being conducted via this document (see Next Steps, the last section of this document).

To comply with Canada's international trade obligations, consultation on the proposed MRLs is also being conducted internationally by notifying the World Trade Organization, as coordinated by the Standards Council of Canada.

The proposed MRLs for novaluron in Canada in or on food, to be added to the MRLs already legally established, are as follows.

**Table 1      Proposed Maximum Residue Limits for Novaluron**

Common Name	Residue Definition	MRL (ppm)	Food Commodity
Novaluron	<i>N</i> -[[[3-chloro-4-[1,1,2-trifluoro-2-(trifluoromethoxy)ethoxy]phenyl]amino]carbonyl]-2,6-difluorobenzamide	0.45	Low growing berries (Crop Subgroup 13-07G)

MRLs are proposed for each commodity included in the low growing berries crop subgroup in accordance with Appendix I.

<sup>1</sup> The relevant report can be accessed by selecting the Programs and Special Actions/Minor Use/Historical tab and opening the Evaluation Report found under Application Number 2010-0596.

A complete list of all pesticide MRLs established in Canada can be found on the Maximum Residue Limits for Pesticides webpage in the Pesticides and Pest Management section of Health Canada's website.

### **International Situation and Trade Implications**

MRLs may vary from one country to another for a number of reasons, including differences in pesticide use patterns and the locations of the field crop trials used to generate residue chemistry data. Table 2 compares the proposed MRLs for novaluron in Canada with the corresponding American tolerances and Codex Alimentarius MRLs<sup>2</sup>. American tolerances are listed in the Electronic Code of Federal Regulations, 40 CFR Part 180, by pesticide. A listing of all established Codex MRLs is available on the Codex Alimentarius Pesticide Residues in Food website.

**Table 2 Comparison of Canadian MRLs, American Tolerances and Codex MRLs**

<b>Food Commodity</b>	<b>Canadian MRL (ppm)</b>	<b>American Tolerance (ppm)</b>	<b>Codex MRL (ppm)</b>
Bearberries, bilberries, cloudberry, cranberries, lingonberries, mulberries, partridgeberries, strawberries	0.45	0.45	No MRL established
Lowbush blueberries	0.45	7.0*	No MRL established

\*1 Lowbush blueberries are excluded from the tolerance established for low growing berries in the United States and are instead included under the tolerance for "Bushberry subgroup 13-07B".

### **Next Steps**

The PMRA invites the public to submit written comments on the proposed MRLs for novaluron up to 75 days from the date of publication of this document. Please forward your comments to Publications (see contact information on the cover page of this document). The PMRA will consider all comments received before making a final decision on the proposed MRLs for novaluron and posting a corresponding Established Maximum Residue Limit document in the Pesticides and Pest Management section of Health Canada's website.

<sup>2</sup> The Codex Alimentarius Commission is an international organization under the auspices of the United Nations that develops international food standards, including MRLs.

## Appendix I

### Crop Groups: Numbers and Definitions

Crop Group		Crop Subgroup		Food Commodities Included in the Crop Group or Subgroup
No.	Name	No.	Name	
13-07	Berries and small fruit	13-07G	Low growing berries	Bearberries Bilberries Cloudberries Cranberries Lingonberries Lowbush blueberries Muntries Partridgeberries Strawberries
